

## **South Jakarta to build waste management facility**

The South Jakarta municipal administration plans to build an Integrated Waste Management Facility (TPST) in Kebayoran Lama in order to process garbage from a nearby traditional market.

Kebayoran Lama subdistrict head Agus Irwanto said that many residents had complained about the number of garbage trucks in the area, which not only smelled bad but also caused traffic congestion.

“With the new TPST, the garbage trucks from Kebayoran Lama Market will not have to travel far. Hopefully, residents will no longer be affected,” Agus said on Thursday as quoted by [beritajakarta.com](http://beritajakarta.com).

Agus said the TPST would also be equipped with machines to process the incoming waste.

The South Jakarta administration previously constructed a TPST in Pesangrahan district, which can process up to 50 tons of waste per day.
