

Indonesian - German Environmental Program

ProduksiH Project

S U M M A R Y

Good Housekeeping

Good Housekeeping (GHK)

Goals

GHK enables small and medium-sized enterprises (SME) to independently and with low external support reach the following :

- Achieve cost reductions in a relatively short period,
- Identify cases of obviously inefficient and environmentally adverse use of natural resources.
- Increase workplace safety, and
- prepare the implementation of adequate measures.

GHK creates a basis for the implementation of further improvements within the environmental management scope.

Target Group

Small and medium-sized enterprises, both in the manufacturing sector and in the service sector.

Main Content

The Good Housekeeping Guide contains :

- General checklists regarding the efficient use of input materials and energy, the reduction and treatment of waste, as well as workplace safety and health protection.
- Information on how to calculate costs

and benefits related to the implementation of measures and how to establish flowcharts.

- In addition, sector - specific checklists have been elaborated in selected languages; presently they are available for tanneries, bakeries, hotels, garages, furniture manufacturers, shoe manufacturers, and food processing companies.

Implementation

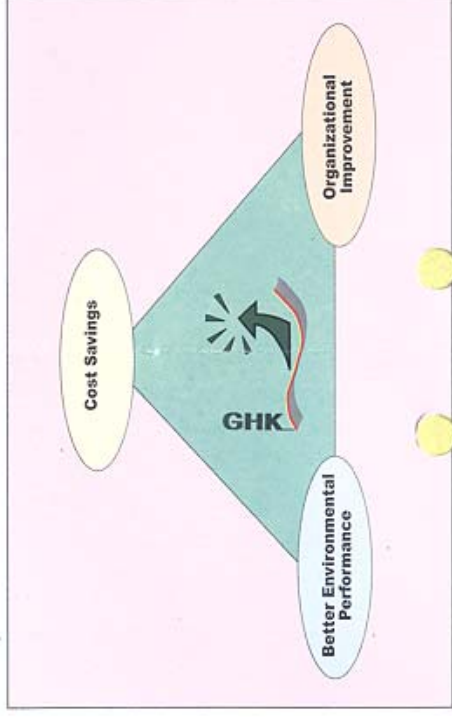

A team which consists of company representatives, an international expert and a local expert will assist the application of the Good Housekeeping

Guide within a local SME during a one-day site visit.

The site-visit includes also a brief discussion on potential improvements. Within one week a report of recommendation is submitted to each respective enterprise. This report could be the basis for an action plan for the company to implement the recommendations until the second visit of the team .

Examples

GHK has been implemented in Brazil, Thailand, the Philippines, Vietnam, Mexico and in the Middle East.

GHK enables companies to reach a triple win

Site visit to identify cost savings

Appropriate raw material storage

Poster for promotion of occupational health & safety

WHAT IS PRODUKSIH ?

Indonesia's rapid industrialization is resulting in both increasing discharge of waste and degradation of natural resources.

Meanwhile, industry managers have realized that in order to stay in business they have to integrate environmental considerations into their marketing strategies.

The government of Indonesia has designed its 'Cleaner Production Strategy' to improve competitiveness, foster energy efficiency, reduce industrial waste, and preserve natural resources. In order to support this Cleaner Production Strategy an Indonesian - German project was launched as part of the Environmental Program that is called ProduksiH (Produksi Bersih).

The Indonesian institution responsible for the project is the Environmental Impact Management Agency (BAPEDAL). GTZ/PEM is supporting the project with know-how and expertise.

Current priorities include:

Textile

- T1 : Gap Analysis Indonesian Government Regulations
- T2 : Gap Analysis German Regulation on Textile Consumer Goods
- T3 : Gap Analysis Management System Regarding Buyer Requirements
- T4 : Gap Analysis Öko-Tex Standard 100
- T5 : Gap Analysis Typical Buyer Requirement (Migros Eco - Label)

Leather

- L1 : Cost-Benefit-Analysis in Leather Tanning Industry
- L2 : Good Housekeeping for Tanneries

General

- G1 : Good Housekeeping
- G2 : Environment-oriented Cost Management
- G3 : Chemical Management
